

SQL BETWEEN with Strings

This query uses the **BETWEEN** operator with string values to filter rows alphabetically using lexicographic comparison.

```
SELECT * FROM employees
WHERE FIRST_NAME BETWEEN 'a' AND 'c';
```

Aspect	Details
What it returns	All employees whose first name falls alphabetically between 'a' and 'c' (inclusive).
Matches	Names starting with a, b, or c such as Alice, Bob, and Charlie.
Doesn't match	Names starting with d through z such as David or Zoe.
Why	BETWEEN uses lexicographic (alphabetical) comparison, and both boundary values are included ($\geq$ 'a' AND $\leq$ 'c').
Caveat	Case sensitivity depends on the database collation settings.

Key Point: The **BETWEEN** operator includes both boundary values. In this example, names beginning with **a**, **b**, and **c** are matched.
